

DISTRIBUTION OF STATE AND LOCAL GOVERNMENT REVENUE BY SOURCE

Introduction

This Policy Brief compares the reliance on various revenue sources across Georgia, its surrounding states (Alabama, Florida, North Carolina, South Carolina, and Tennessee), Colorado, Texas, and Virginia. Revenue sources at the combined state and local level, at the state level, and at the local level are considered. Revenue is measured by own source general revenues (i.e. excluded are intergovernmental grants, and revenues from liquor stores, utilities, and trust funds) obtained from the U.S. Bureau of the Census. The data are for 2004-05, the most recent available.

Revenue Shares

A. Own Source Revenue

Table I presents the share of taxes in the total general revenue of state governments, local governments, and state and local governments combined for the U.S. and for each of the nine comparison states. (The Appendix contains detailed tables.) The following discussion outlines main differences observed across the nine states.

- *State and Local Governments.* Across the U.S., almost 70 percent of the combined state and

local government own source revenue comes from taxes, while the remaining 30 percent comes from charges and miscellaneous revenue. The nine states considered here rely less on taxes than the U.S. average. Georgia's share of taxes is very similar to the U.S. average, but above that for the other states. There is substantial similarity in the states' relative reliance on taxes, with the exception of Alabama and South Carolina, where taxes account for about 58 percent of total revenue.

- *State Governments.* On average, almost three quarters of state government revenue come from taxes in the U.S. For the states considered here there is wider variation in state government relative reliance on taxes than for state and local governments combined. In Georgia, taxes are 78 percent of the state government revenue, which is slightly above the U.S. average and the other states, with the exception of North Carolina.
- *Local Governments.* Across the U.S., about 63 percent of local government revenue comes from taxes. For most of states considered here local governments rely less on taxes than the U.S. average, with the exception of Texas and Virginia.

For most of the nine states, local governments rely less on taxes than do state governments. There is even greater variation across states in local governments' reliance on taxes, with a range from 45.9 percent to 70.7 percent. Georgia's local government reliance on taxes is slightly below the national average.

B. Taxes

Table 2 considers the property tax, the general sales tax, and the individual income tax as a share of own source revenue and of tax revenue of state and local governments combined. For the U.S., these three taxes account for 77 percent of tax revenue.

- *Property Taxes.* Property taxes are a significant revenue source in all states in our sample, but there is a lot of variation. Property taxes as a share of combined state and local government own source revenues were only 9 percent in Alabama, while they were above 29 percent in Texas. Property taxes were 21 percent of combined state and local government own source revenues in Georgia. This was about the same as the national average, and slightly above the average for the nine comparison states. (Property taxes are a local revenue source; state governments for all of the nine states get less than 2 percent of their own source revenue from property taxes.)
- *General Sales Taxes.* Sales and gross receipts taxes are the most important source of revenue for most states. General sales taxes amounted to 10 percent of combined state and local government own source revenues in Virginia, while they were three times that amount (31 percent) in Tennessee. Tennessee, Florida (where general sales taxes contributed 22 percent), and Texas (20 percent) do not have a general income tax, so the state governments of those states rely more heavily on sales taxes.

For Georgia, general sales taxes contributed 19 percent to combined state and local government revenues, and 28 percent of total taxes. These are slightly above the U.S. averages, and generally above the comparison states that have income taxes. One reason Georgia's sales tax share of own source revenue is above the national average is the reliance of local governments in Georgia

on sales taxes. Over 12 percent of local government own source revenue in Georgia is from sales taxes, compared to 7 percent for the nation.

- *Individual Income Taxes.* There is wide variation in the share of the combined state and local government accounted for by the individual income tax. As noted above, Texas and Florida impose no individual income tax, while the individual income tax in Tennessee is limited to dividends and interest income only. In Georgia, the individual income tax was about 19 percent of combined own source revenues of state and local governments and 27 percent of total tax revenue. These shares are above the national averages of 15 percent and 22 percent, respectively, and generally above the share for the comparison states.

Personal income tax revenue is a state level revenue source, none of the local governments in the nine comparison states has a personal income tax. Georgia's state government collects 36 percent of its own source revenue from the individual income tax, which is well above the national average of 25 percent. However, that share is comparable to the share for Colorado, North Carolina and Virginia.

C. Selective Sales Taxes

For the U.S., 7.6 percent of state and local government own source revenue, and 11 percent of tax revenue, is derived from selective sales taxes (Table 3). Most selective sales tax revenues come from the taxation of motor fuel, public utility services, and taxation of tobacco products.

Selective sales taxes were the highest share of the combined state and local government revenue in Alabama (nearly 11 percent), while they were the lowest in Colorado (little over 5 percent). Georgia's reliance on selective sales taxes is less than the U.S. average and less than all but two of the comparison states. This is also the case just for state government revenue, as revenue from selective sales taxes is more important for state governments than for local governments.

For the states we considered, motor fuel taxes ranged from 2.2 percent (in Virginia) to 3.4 percent (in North Carolina and Tennessee) of the combined state and local government revenue, not a large difference. Among the comparison states local governments do not generate motor fuel revenue except in Alabama and Florida.

Summary

The analysis of the composition of own source revenue illustrates that there are differences across states, and these differences are sometimes large. However, there is no optimal mix of revenue for a given state. The best mix of revenue for a state depends on many factors. For example, if the state desires local control of spending, then property taxes are likely to be of more importance. If citizens of a state prefer a more progressive tax structure, then that state will likely rely more heavily on the income tax and less on the sales tax. If citizens believe that the beneficiaries of public services should pay for them, then charges will be relatively more important.

One way to summarize the differences in the revenue structures is to compare each state's revenue structure to some norm, which we took as the U.S. average. This is clearly arbitrary, but it does reflect the mix of revenue sources across all states. We considered nine revenue categories: property tax, general sales tax, selective sales taxes, individual income tax, corporate income tax, motor vehicle license, other taxes, current charges, and miscellaneous revenue. For each of these categories we calculated the absolute value of the difference between the state's share and the U.S. average share using the data in Appendix Table A1, and then summed these across all nine categories. We call this the Comparison Index (CI); it is the total percent deviation from the norm.

A CI value of zero means the state has a revenue structure that is identical to the U.S. average. The larger the value of CI, the more the state differs from the U.S. average. The values of CI are presented in Table 4. Other than Colorado, among the nine states Georgia has a revenue structure that most closely matches the U.S. average. States without income taxes (Florida, Tennessee, and Texas) have much higher values of the Comparison Index.

ABOUT THE AUTHOR

Nikola Tasić is a research associate in the Fiscal Research Center of the Andrew Young School of Policy Studies at Georgia State University and is currently finishing his Ph.D. in Economics, writing on the effects of financial development on economic growth. His research interests include state and local public finance reforms in transition countries, intergovernmental transfers, and financial development. Tasić holds B.S. in economics from San Jose State University and M.A. in economics from Georgia State University.

ABOUT FRC

The Fiscal Research Center provides nonpartisan research, technical assistance, and education in the evaluation and design of state and local fiscal and economic policy, including both tax and expenditure issues. The Center's mission is to promote development of sound public policy and public understanding of issues of concern to state and local governments.

The Fiscal Research Center (FRC) was established in 1995 in order to provide a stronger research foundation for setting fiscal policy for state and local governments and for better-informed decision making. The FRC, one of several prominent policy research centers and academic departments housed in the School of Policy Studies, has a full-time staff and affiliated faculty from throughout Georgia State University and elsewhere who lead the research efforts in many organized projects.

The FRC maintains a position of neutrality on public policy issues in order to safeguard the academic freedom of authors. Thus, interpretations or conclusions in FRC publications should be understood to be solely those of the author. For more information on the Fiscal Research Center, call 404-413-0249.
