Issue Lab API guide

Knowledge center addendum

Date last modified: 2/11/2022

This addendum provides knowledge center -specific parameters that can be used with Issue Lab’s application programming interface (API) to provide you with all or a portion of the data contained in your knowledge center. Please see the “Issue Lab API Guide”, available at <https://issuelab.org/api>, for complete details about our API.

Parameters

We offer three API parameters specific to knowledge center data:

- 1) `kc`
- 2) `kc_featured`
- 3) `kc_cat`

Use these parameters together to make requests targeting specific knowledge center content. You can also use these parameters in conjunction with the general API parameters such as “issues”, “pub_date”, “number”, “sort”, etc. Please see the “Issue Lab API Guide” for complete details.

Note: All examples in this section use “*your-key*” to indicate where an API key is required, and “*your-kc*” to indicate the knowledge center to retrieve data from. To receive data, please replace “*your-key*” with your actual API key, and “*your-kc*” with your knowledge center’s URL, sans .issuelab.org. In other words, if your knowledge center resides at <https://xyz.issuelab.org>, you would use “xyz” in place of “*your-kc*” in the following API request examples.

Parameter: kc

Optional

Using the “kc” parameter requests all data that is available in your knowledge center.

Example:

Fetch all records available in my knowledge center in json format:

<https://data.issuelab.org/fetch/key/your-key/format/json/kc/your-kc>

Parameter: kc_featured

Optional

Use the “kc_featured” parameter to request everything that is featured in your knowledge center.

Example:

Fetch all records in XML format that are currently featured in my knowledge center:

https://data.issuelab.org/fetch/key/your-key/format/xml/kc/your-kc/kc_featured/yes

Parameter: kc_cat

Optional

Use the “kc_cat” parameter to request everything in your knowledge center categorized under a specific custom category.

Example:

Fetch all records in json format that I have applied the “my-category” category to:

https://data.issuelab.org/fetch/key/your-key/format/json/kc/your-kc/kc_cat/my-category
